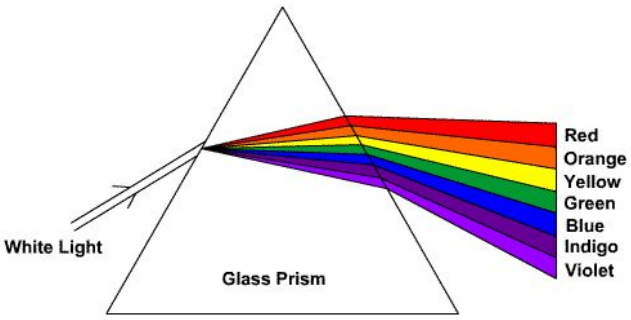
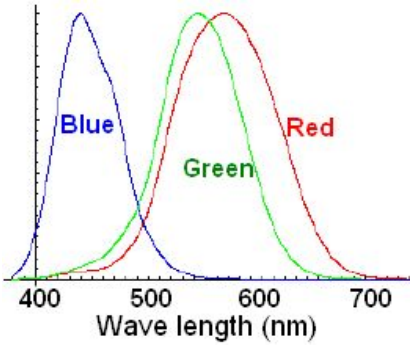
Music marks for expression

Construction of tone color (Wave form)

Light spectrum makes color

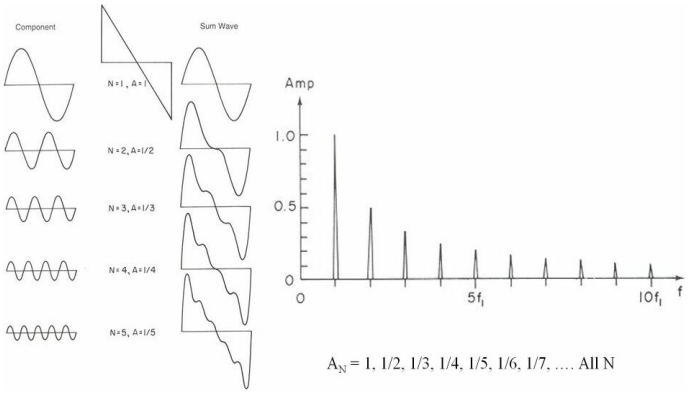


Relative spectral sensitivity of the three types of cones in the human retina

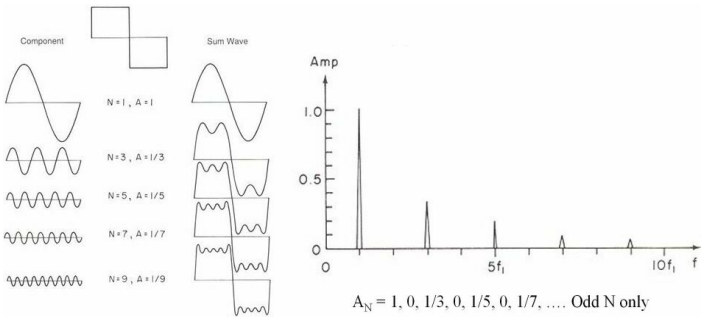


Sound spectrum makes tone color

* Tooth Wave



* Square Wave (Sounds like clarinet)



ADSR envelope

The contour of the ADSR envelope is specified using four parameters:

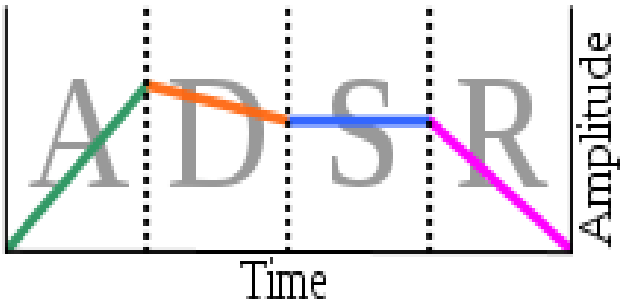
Attack : How quickly the sound reaches full volume after the sound is activated (the key is pressed).

Decay : How quickly the sound drops to the sustain level after the initial peak.

Sustain : The "constant" volume that the sound takes after decay until the note is released.

Release : How quickly the sound fades when a note ends (the key is released). Often, this time is very short.

Key-pressed ↓ Key-released ↓



Spectrum envelope
